

CODE	MODALITY	DESCRIPTION
LV	Live Videoconferencing (Synchronous)	Live 2-way interaction between a person and a provider using audiovisual telecommunications technology
OST	Outpatient Specialty Teleconsultations (Synchronous)	Video consults between a specialist and PCP who is with the patient at the time of the visit and delivers real time advice regarding the care and management of the patient.
SAF	Store-And-Forward (Asynchronous)	Transmission of recorded health history through an electronic communications system to another provider, often a specialist, who reviews the information to evaluate the case but not in real-time.
EC	E-Consults (Asynchronous)	Interprofessional internet consultation using structured electronic communication between a PCP and specialist with guidance by the specialist to the PCP regarding the patients care and management.
RPM	Remote Patient Monitoring (RPM)	Monitoring and tracking a patient's condition(s) outside of a typical clinical setting on a regular, on-going basis. Typically not performed directly by the provider but instead utilizes a group (nurses etc) who can facilitate interventions as needed. This can be done directly by the monitoring entity or via outreach to the provider to obtain recommendations.
VCI	Virtual Check-In	Brief, non-face-to-face communication (phone or audio visit) between a provider and a patient (pre-established care) in order to assess the patient current status between in-person visits.
AVCV	Acute Virtual Care Visit	Online visits designed to provide rapid care for common conditions which can be real-time video visits or asynchronous, no-video interviews.
MH	Mobile Health	Healthcare, public health practice and education and information supported by mobile communication devices such as cell phones, tablets etc.
